WELCOME TO THE MICHELIN COMPETITION WORLD

Michelin's mission has always been to contribute to better mobility of people and property. In order to respond to the doubling of the number of vehicles over the next thirty years, Michelin is innovating in favour of safer, sustainable and environmentally-friendly mobility.

COMPETITION HAS BEEN PART OF THE MICHELIN DNA AND PHILOSOPHY FROM THE VERY FIRST DAY.

In order to assist in these changes, Michelin has a Technologies Centre, with 6000 researchers, and also an extreme laboratory to test the solutions of tomorrow with its partners on circuits and grounds the world over: competition!

Michelin is the only brand that has developed so many prize-winning Competition technologies for over 100 years. This is Michelin's prestigious and authentic heritage, and is also the expression of a passion shared within the company.

Michelin pulls out all the stops to be present in competition that make sense to the mobility of tomorrow and assists its partners to victory by demonstrating the extraordinary quality and performance of its products while developing innovative technologies that benefit consumers.

These commitments are carried through global or national trials, at both professional and amateur level. They aim to strengthen the renown of the Michelin brand in mature countries and introduce it to its new markets.

For Michelin, competition is also a better way forward.

READING A TYRE

EX.: **27/65-18 S9L RFID**

27: Tread width in cm

65: External tyre diameter in cm

18: Rim diameter in inches

S: Slick

9: "Hard" rubber compound

L: Development

RFID: Chip for reading tyres

CODE À BARRE: FIA regulation

CHIFFRE (7, 8, 9): Rubber rigidity

7: Soft

8: Medium

9: Hard

LETTER (L, M): Development

ALL ABOUT **RFID TECHNOLOGY**

The RFID system is a new tool allowing for automatically checking the tyres authorized over a weekend. Thanks to RFID chip dynamic read technology resulting from WEC, this new product allows for ensuring the regulations are respected by the competitors while improving ergonomics for the staff appointed to check tyres. Configurable per championship, this system is available for competition clients.

THE RFID SYSTEM: WHAT DOES IT DO AND WHY?

- The system uses an RFID TAG transponder placed in the tyres before curing, encoded at the factory after curing and containing the data then allowing the tyres to be identified remotely. Caution! The RFID is not a sensor!
- Content: FIA barcode + a CAI.
- Reading can be taken statically using an RFID Terminal.
- Dynamic reading up to 60 km/h on exiting the pitlane.
- Records from slick tyres only

THE ADVANTAGES AND CONSEQUENCES OF THE RFID SYSTEM

Advantages in relation to the FIA barcode labelling system.

- Removes the problem of illegible FIA labels.
- Prevents any chance of cheating as the RFID TAG is locked at the factory (OUT ONLY).
- The TAGs are read instantly and do not require alignment of the Terminal with regard to the tyre.
- Allows for managing stocks and traceability of tyres in storage.
- Automates controls and reduces the number of technical officials

ADVICE FROM **THE MICHELIN TECHNICIAN**

COLD PRESSURE PREPARATION

In order to target a hot pressure (usage pressure), we must first determine the starting pressure, known as the cold pressure.

When heating a tyre, we adopt a rule that remains a general idea, but which is reliable: we can establish the equivalence that $1^{\circ}\text{C} = 0.01 \text{ bar}$.

E.g.: 1.20 bar at 20°C becomes 1.30 at 30°C.

Otherwise, you can use a "control set". This is a reference set, stored at the same ambient temperature as the other tyres, which will allow you to adjust the cold pressure of your sets in use throughout the day.

WARM-UP

If you use a heater cabinet or tyre warmers, the max. temperature is 80°C. Above this, the rubber properties may change and thus deteriorate performance.

The min. heating time is 45 minutes to arrive at stabilization.

The max. heating time is 2 hours (beyond this there is a risk of the rubber changing).

SET-UP TIPS

- Comply with our recommendations (camber and pressure values in accordance with vehicle loads).
- It is possible to adjust the vehicle's front and rear pressures in order to improve the balance.
E.g.: If the car oversteers, apply a lower pressure at the rear than at the front.
- It is possible to mix the front and rear rubbers if there is a front warm-up problem for propulsion, e.g.: S8 front and S9 rear.
- For a rain tyre, adjust the pressure in accordance with the water quantities. (Increase the pressure in the event of aquaplaning, to lower the contact area).

BIMP AIR

PATENTED

RIDE
DON'T
STOP

88G CO2 REFILLABLE CARTRIDGE

THE HIGHEST CO2 CAPACITY
ON THE MARKET!

INFLATE AND DEFLATE FUNCTIONS

REFILLABLE THROUGH
MICHELIN MOTORSPORT'S DEALERS

EXCHANGE A FULL CARTRIDGE
FOR AN EMPTY ONE

RESULTS

Refill a standard car tyre completely, or
adjust the pressure on all 4 tyres (300g per tyre)

For example:

1.490 bars for 1 205x55x16 tyre
or 0.372 bars for each 1 of 4 tyres

SINGLE-SEATER & PROTOTYPE

= RFID CHIP

MICHELIN

**NEW****PILOT SPORT LEGENDS S819**

New product developed specially to meet the requirement of LMP1 classic vehicles.

- New architecture integrating the range of our latest technologies while respecting vehicle balance
- **An adapted mixture in order to encourage good warm-up**
- **Constant performances throughout the race**

**PILOT SPORT S412**

Our reference single-seater product has won over numerous drivers, especially in FR2.0.

- Architecture resulting from our latest technologies ensuring a better level of grip than the competition
- **A mixture suited to the stresses of single-seaters, allowing for fast warm-up**
- **Constant performances throughout the race**

**NEW****PILOT SPORT LEGENDS P219**

New product developed specially to meet the requirement of LMP1 classic vehicles.

- **New architecture integrating the range of our latest technologies while respecting vehicle balance**
- **High-performance tread, allowing a high water evacuation potential**

**PILOT SPORT P412**

Like the slick version, it benefits from the latest architecture technologies, to which we have added:

- **a mixture suited to driving in the rain**
- **a tread optimized for evacuating water**

TOURING & GT

PILOT SPORT GT M

The PILOT SPORT GT M is the latest development of our track range. Stemming from the PILOT SPORT GT L, it thus retains the same benefits:

- better performance consistency
- increased driving pleasure with a good warm-up/endurance compromise
- increased lateral support

It is set apart from its predecessor by:

- **the improvement in its architecture, which enables it to absorb the vehicle stresses**

PILOT SPORT GT L

The PILOT SPORT GT L integrates the latest technologies resulting from our WEC and GT500 championships. The changes have allowed for having a strengthened architecture in relation to the previous range, with a more-enduring casing. This tyre provides:

- **better performance consistency**
- **increased driving pleasure with a good warm-up/endurance compromise**
- **increased lateral support**

PILOT SPORT GT P2L

The PILOT SPORT GT P2L is the new generation of rain tyres intended for Touring/GT vehicles. It benefits from the latest technologies stemming from WEC.

- a mixture performance level identical to the P2H, allowing a high level of grip
- **a tread that has been studied to increase the performance on drying tracks while guaranteeing good evacuation in the wet**

P2G and P2H
tread for
18" and 19"
vehicles

P2G and P2H
tread for
15" and 17"
vehicles

PILOT SPORT GT P2G

The PILOT SPORT GT P2G comprises a slick architecture and a rain mixture:

- **excellent compromise between grip and water evacuation**
- **increased grip return thanks to its slick architecture**

PILOT SPORT GT P2H

The PILOT SPORT GT P2H has a tread identical to the P2G. Thanks to a better-performing mixture, **the P2H provides more grip on drying surfaces.**

POSITIONING OF THE PILOT SPORT GT RANGE

GUIDE TO USING ***CIRCUIT TYRES***

INTRODUCTION

We recommend you comply with the following safety and usage instructions. These instructions are valid subject to more restrictive local statutory provisions for tyres decreed or required by the competition, raid or track organizers. Failure to comply with these instructions or procedures may give rise to an incorrect fitting or firmment and cause premature deterioration of the tyre.

Use on banking circuits requires specific tyres and/or conditions of use. Prior to any use, read the recommendations for use on our website www.michelinmotorsport.com or make enquiries with Michelin services: 00 33 (0) 4 73 30 14 55.

RECOMMENDATIONS

Pre-use verification rules

The tyre choice must comply with the vehicle's fittings, as defined by this vehicle's manufacturer and constructor. Ensure that the tyres are of the same type on the same axle (brand, trade name, dimensions, structure).

Prior to fitting, ensure:

- That the rim diameter corresponds exactly to the internal diameter of the tyre.
- That the rim width complies with the manufacturer's recommendation or failing that with listed standards (ETRTO, TRA, JATMA, etc.).
- That the rim type (tubeless, tube type) corresponds to the tyre type.
- That the rim is in good condition and shows no signs of deterioration (split, deformation, etc.).
- That the rim has sufficient resistance to support the pressure required for the fitment.
- That the tyres are not showing any signs of repairs.

TYRE RETREADS

- Retreading a tyre modifies its characteristics and performance. The operation requires suitable equipment and tools, as well as compliance with instructions.
- Retreading a used tyre (not new) is prohibited.
- Prior to any retreading operation, contact the Michelin department: +33 (0) 4 73 30 14 55.

Reminder: Retreading or regrooving ECE R30-approved tyres, intended for use on public roads, is prohibited.

CONDITIONS OF USE

- Never treat the tread rubber with a chemical.
- Do not use tyres for which the background is unknown.
- Within the framework of the use of heating cabinets, never place fitted assemblies in contact with metal parts and/or directly over the heat source.
- Ensure that the pressure, bodywork, speed and axle load values are those recommended by Michelin in accordance with the intended use (update the recommendations in accordance with use)

Standard recommendations for use are available on our website www.michelinmotorsport.com or contact Michelin services: 00 33 (0) 4 73 30 14 55.

FITTING AND REMOVING A TYRE

Fitting, removing, inflating and balancing tyres must be carried out using suitable equipment in good condition, and entrusted to trained and qualified personnel, who will ensure, in particular:

- Compliance with the constructor's and the legal rules in choosing tyres.
- Prior inspection of the external and internal appearance of the tyre by the fitter.
- Compliance with the tyre fitting, removal, balancing and inflation procedures.
- Compliance with the positioning of the tyre on the vehicle (left, right; front, rear).
- Compliance with the working pressure.
- Measurement equipment such as a pressure gauge or torque wrench must be calibrated and inspected at least once a year by an approved body, or failing this by the supplier or manufacturer.

Fitting - Removal:

- Ensure that the fitting equipment is suited to the fitment type. When using this equipment, refer to the machine manufacturer's user manual.
- Comply with the fitting direction for a directional tyre.
- Lubricate rim seats and tyre beads with a suitable product.
- In the case of a tube type fitment (with inner tube), the dimension of the inner tube must correspond to that of the tyre (cross section and diameter) and the rim must be in a condition to accept the inner tube without damaging it.

Inflation

- Important note: only use inflation stations intended for this purpose. In no event should the operator remain in immediate proximity to the tyre assembly. As a result, you must ensure that the compressed air pipe fixed to the valve is equipped with a safety clip and that it is of a sufficient length to allow the operator to move beyond any projection trajectories, in the event of an incident. Keep people not involved in the inflation operation away from the site where this is carried out.
- Remove the interior part of the valve.
- Start inflation and check the beads are correctly centred in relation to the edge of the rim.
- If the beads are poorly centred, deflate and start the operation again in full, including lubrication.
- Continue to inflate to 3.5 bar in order to obtain correct bead placement. For higher pressures, use a protection cage when inflating the tyre.
- Replace the valve interior and adjust the pressure of use.
- Install the polyamide cap with seal in order to ensure full leak-tightness.

Balancing

- It is recommended the four tyres be balanced for track use.
- The balancing machines must be calibrated in accordance with manufacturer instructions.
- Specific attention will be paid to the mechanisms (cone/screw plate) centering the assembly on the machine.

STORAGE AND TRANSPORT

There should be compliance with certain important points during storage and transport, such as temperature, which must be higher than:

Range	Minimum storage temperature	Minimum transport temperature
Slick (Track)	10°C	15°C
Rain (Track)	5°C	10°C

Furthermore, tyres must not be subject to:

- Direct and prolonged exposure to sunlight
- Sources of extreme heat and humidity (storage in tropical-type weather conditions)
- Solvents, lubricants, fuels and other chemicals
- Ozone emissions from equipment such as a transformer, welder, electric motor, etc.
- Long-term storage in a stack.

Non-compliance with these storage recommendations may significantly reduce the period over which the tyre retains its performances.

The storage location must be dry, ventilated, out of direct light and kept solely for tyres. Racks allowing tyres to be stored vertically are to be used in order to avoid tension on the casings.

TYRE AGING

- Tyres age, even if they are not used, or if they are only used occasionally; excessive tyre age can lead to a loss of grip.
- Remove tyres from use when these show clear signs of aging or wear (cracks in the rubber of the tread, shoulder or lower zone sidewall, deformations, etc.). If in doubt, refer to a tyre professional.
- We recommend using Michelin Competition tyres within a maximum of twenty four months following their date of purchase (within 3 months in the event of storage in severe tropical-type conditions).

VALVE

- Comply with the instructions for use provided by the manufacturers (tightening and rim compatibility, type of alloys, alignment).
- Systematically retighten the polyamide valve cap with seal (equipment necessary for correct heat resistance). This ensures the valve mechanism is protected and that the tyre assembly is leak proof.
 - Ensure the valve is in good condition (no ovalisation, signs of impact, etc.).
 - Regularly check the tightening torques on screw valves.
 - Only use metal valves (track)

MONITORING AND MAINTENANCE

- Tyre pressure verification prior to each outing and correction of this pressure if it no longer corresponds to the working pressure. Tyre pressures must be checked when cold (tyre that has not been run on, that has not been heated).
- Inflation with nitrogen does not do away with the need for regular tyre pressure checks.
- In the event of unusual pressure loss, check the internal and external condition of the tyre as well as the condition of the wheel and valve.
- Any visible perforation, cut or deformity must form the subject of an in-depth inspection by a tyre professional. Without intervention by a professional, never use a damaged tyre or one that has been run flat.

DAMAGE ***RECOGNISING AND ACTING***

DAMAGE TO TYRES

NO INJURY OR DEFORMATION IS TO BE IGNORED

Any visible injury or abnormal sign (sidewall or tread deformation, deep cut, break, appearance of vibrations, racking suffered by the vehicle, etc.) must form the subject of an in-depth examination. The diagnostic will allow for establishing whether the tyre can be repaired or is to be definitively withdrawn from use.

THE CONSEQUENCES OF UNDER-INFLATION

Running at an insufficient pressure leads to excessive tyre flexion, causing abnormal overheating and irreversible damage.

A tyre showing marbling must in no event be repaired and put back into use.

The signs and consequences of running on under-inflated tyres can be seen in the form of:

1. Marbling (folding of the inner calendered rubber).
2. Dislocation of part or all of the inner calendered rubber.
3. Total or partial loss of tread.
4. Circular rupture of the casing ply.

The signs are undetectable from the outside, hence the need to remove the tyre in the event of a puncture, in order to check its condition.

CRACKS

Description

Tread cracks.

Causes

Product ageing. Exposure to ozone, UV, use of aggressive cleaning product. Risk of developing into breaks.

Changes

Breaks.

Checks/advice

- Check the use, parking/storage and vehicle maintenance conditions.
- Replace the product(s) concerned if the cracks are deep and reach the plies or the casing.

CROWN SEPARATION

Observation

Tear to all or part of the tread

Probable cause(s)

These tears are the result of separations between the elements forming the internal structure, generally caused by excessive overheating due to:

- prolonged running on under- or over-inflated tyres
- equipment not complying with the vehicle constructor's recommendations (speed/load indices)

- generalized rusting of the internal metal structure, due to cuts, punctures, and miscellaneous aggression suffered by the tread.

Tips

Tyre: remove from use

Vehicle :

- check all the vehicle's tyres
- comply with the constructor's recommendations (speed/load indices)
- check and re-establish the pressures in accordance with the constructor, or failing this, manufacturer recommendations.

DEFORMATIONS

Observation

Blister(s), localized hernia(s) with or without signs of impact (cuts, scratches, etc.)

Probable cause(s)

These deformations are the result of an accidental rupture of one or more casing ply cables, caused by:

- contact with an obstacle (pavement, pothole, etc.),
- sidewall pinched between obstacle and rim.

Under- or over-inflation encourages this type of damage.

Tips

Tyre: remove from use

Vehicle: check the condition of the rim

WHAT SHOULD BE DONE IN THE EVENT OF DAMAGE?

When an end client notices damage, he/she must report this to his/her dealer or to an on-site Michelin technician.

If there is no technician at the event, the official Michelin dealer must collate the information below and forward it to the Michelin technician for his/her country or who is responsible for the championship.

The complaint must be drawn up and sent by the Michelin technician to the Michelin Quality Service.

The major data to be provided to the Michelin technician is:

- **Client identification:** team/driver name / address / tel. / email address
- **Does the client expect a response?**
- **What event?** Championship / track / date / stage (race, qualification, test, etc.)
- **What vehicle?** make / model / power / CC / 2WD/4WD / category
- **What tyre?** dimension/position / rim used / FIA/Label. Was the tyre driven on?
- **What were the conditions of use?** camber / cold pressure / hot pressure / total distance covered by the tyre / air and ground temperatures
- **What damage?** equipment? bodily harm?
- **Description of the problem**
- **How many tyres affected?**
- **Attach photos if possible**

The depth of information contributes highly to the quality and speed of the response.

RECOMMENDATIONS FOR USE ***CIRCUIT TYRES***

IMPORTANT RECOMMENDATIONS REGARDING THE MICHELIN CUSTOMER COMPETITION RACECAR TIRES

CUSTOMER COMPETITION

We recommend to all users of Michelin customer race car tires to read the "safety guidelines" which are attached to this document. Exceeding of some of these data levels (f.e. camber) may cause a tyre damage or a fall of performances: higher tyre wear, influence concerning balance problems (oversteer/understeer), lap times will finally also drop (less constant).

Michelin guaranty the integrity of tyre construction for a limited number of stint. The number of stint is determined according to the following criterions:

- Maximun load on the tyre (Static + aerodynamical)
- Vehicule maximum speed
- Rim type
- Camber
- Minimum hot inflation pressure

One stint is equivalent to the mileage indicated (including a maximum of 2 pit stops and/or driving under pace car).

Therefore, depending on the conditions of use, a tyre must be replaced in this two cases:

- it has reached the indicated mileage even if the tread wear potential is not reached.
- it is completely worn out even if the indicated mileage has not been reached.

These recommendations are valid unless the tyres have been damaged: for example puncture or flat spots.

The recommendations regarding rain tyres are only for wet conditions and not intended for a dry or drying race track.

After a run, the delta of temperature between the inside shoulder and the outside shoulder must be less than 20°C.

**For any use apart from the defined recommendations, please contact Circuit Michelin technical department phone:
› Tél. + 33 (0) 4 73 32 90 25.**

26/64-13

Recommendation for Single-seater Sprint Slick/Wet: 26/64-13 S312 / S412 / P312 / P412

Use	Track without banking
Maximum load	450 DaN
Maximum speed	300 Km/h
Nominal rim	11,75 (+/- 0,5) J 13
Minimum cold pressure	1.1 Bar
Run distance	200 Km

Number of runs	Minimum hot pressure					
Camber	1.45 Bar	1.5 Bar	1.6 Bar	1.7 Bar	1.8 Bar	1.9 Bar
-4 °	0	1	1	1	1	1
-3.5 °	0	1	1	1	1	1
From -2.0 to -3.0 °	0	1	1	1	1	1

27/65-18

Recommendation for S9L TCR International: 27/65-18 S9L / P2L

Use	Track without banking
Maximum load	400 DaN
Maximum speed	280 Km/h
Nominal rim	11 (+ 0,5 / -1) J 18
Minimum cold pressure	1.2 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure				
Camber	1.70 Bar	1.80 Bar	1.90 Bar	2.00 Bar	2.10 Bar
-4.5 °	0	0	1	1	1
-4.25 °	0	0	1	1	1
-4.00 °	0	1	1	1	1
-3.75 °	0	1	1	1	1

Recommendation for Wet: 27/65-18 P2G

Use	Track without banking
Maximum load	500 DaN
Maximum speed	320 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.4 Bar
Run distance	250 Km

Number of runs	Minimum hot pressure					
Camber	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar
-3.5 °	0	1	1	2	2	2
-3.25 °	0	1	2	2	2	2
-3.0 °	0	2	2	2	2	2
From -2.0 to -2.75 °	0	2	2	2	2	2

Recommendation for Slick: 27/65-18 S9L / S8L

Use	Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.4 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure				
Camber	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar
-4.0 °	0	0	0	1	1
-3.5 °	0	0	0	1	1
-3.0 °	0	0	0	1	1
From -2.0 to -2.5 °	0	2	2	2	2

Recommendation for Slick: 27/65-18 S7H / S8H / S9H / S9LL / S9G

Use	Track without banking
Maximum load	400 DaN
Maximum speed	320 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.4 Bar
Run distance	250 Km

Number of runs	Minimum hot pressure				
Camber	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar
-4.0 °	0	0	0	0	1
-3.5 °	0	0	0	1	1
-3.0 °	0	0	1	1	1
From -2.0 to -2.5 °	0	1	1	1	1

Recommendation for Slick: 27/65-18 S7H / S8H / S9H / S9LL / S9G

Use	Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.4 Bar
Run distance	250 Km

Number of runs	Minimum hot pressure					
Camber	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.1 Bar
-3.0 °	0	0	0	1	1	1
-2.5 °	0	0	1	1	1	1
-2.0 °	0	1	1	1	1	1
From 0 to -1.5 °	0	1	1	1	1	1

Recommendation for Slick: 27/65-18 Porsche Cup N2# / Porsche Cup N2

Use	Track without banking
Maximum load	400 DaN
Maximum speed	280 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.2 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure					
Camber	1.6 Bar	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar
-4.5 °	0	0	1	1	1	1
-4.25 °	0	0	1	1	1	1
-4.0 °	0	1	1	1	1	1
From -2 to -3.75 °	0	1	1	1	1	1

Recommendation for Wet: 27/65-18 P2L

Use	Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.4 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure				
Camber	1.6 Bar	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar
-4 °	0	0	0	1	1
-3.5 °	0	0	0	1	1
-3 °	0	0	0	1	1
From -2 to -2.5 °	0	2	2	2	2

27/67-19

Recommendation for Wet: 27/67-19 P2E

Use	Track without banking
Maximum load	540 DaN
Maximum speed	320 Km/h
Nominal rim	10.5
Minimum cold pressure	1.3 Bar
Run distance	200 Km

Number of runs	Minimum hot pressure				
Camber	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar	2.4 Bar
-3.5 °	0	0	0	1	2
-3.25 °	0	0	0	2	2
-3.0 °	0	0	1	2	2
From -2.0 to -2.75 °	0	1	2	2	2

27/68-18

Recommendation for Slick and Wet - VLN Porsche Cayman: 27/68-18 Porsche Cup N2 / P2G

Use	Circuit VLN Nordschleife - Porsche Cayman
Maximum load	550 DaN
Maximum speed	320 Km/h
Nominal rim	11 (-1/+0.5) J 18
Minimum cold pressure	1.1 Bar
Run distance	200 Km

Number of runs	Minimum hot pressure					
Camber	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar
-4.25 °	0	1	1	2	2	2
-4.0 °	0	2	2	2	2	2
-3.75 °	0	2	2	2	2	2
From -2 to -3,5 °	0	2	2	2	2	2

Recommendation for Wet: 27/68-18 P2G / P2L

Use	Track without banking
Maximum load	500 DaN
Maximum speed	280 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.3 Bar
Run distance	250 Km

Number of runs	Minimum hot pressure					
Camber	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar
-3.5 °	0	0	0	0	1	1
-3.25 °	0	0	0	1	1	1
-3.0 °	0	0	1	1	1	1
From -2.0 to -2.75 °	0	1	1	1	1	1

Recommendation for Slick: 27/68-18 S9F / Porsche Cup N1 / Porsche Cup N2 / S8E

Use	Track without banking
Maximum load	550 DaN
Maximum speed	320 Km/h
Nominal rim	11 (+/- 0,5) J 18
Minimum cold pressure	1.5 Bar
Run distance	200 Km

Number of runs	Minimum hot pressure					
Camber	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar	2.4 Bar
-4.25 °	0	1	1	1	1	1
-4 °	0	1	2	2	2	2
-3.75 °	0	2	2	2	2	2
From -2.0 to -3.5 °	0	2	2	2	2	2

28/69-19

Recommendation for Slick: 28/69-19 S9A

Use	Track without banking
Maximum load	400 DaN
Maximum speed	320 Km/h
Nominal rim	11 (+/- 0,5) J 19
Minimum cold pressure	1.2 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure				
Camber	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar

30/68-18

Recommendation for Slick: 30/68-18 S8H / S7H / S9H

Use	Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	12,5 (+0,5/- 1,5) J 18
Minimum cold pressure	1.4 Bar
Run distance	250 Km

Number of runs	Minimum hot pressure				
Camber	1.6 Bar	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar
-4 °	0	0	0	0	1
-3.5 °	0	0	0	1	1
-3 °	0	0	1	1	1
-From -2 to -2.5 °	0	1	1	1	1

Recommendation for Slick: 30/68-18 S7L / S8L / S9L / S9L RFID

Use	Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	12,5 (+0,5/- 1,5) J 18
Minimum cold pressure	1.3 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure				
Camber	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar
-4 °	0	0	2	2	2
-3.5 °	0	3	3	3	3
-3 °	0	3	3	3	3
-From -2 to -2.5 °	0	3	3	3	3

Recommendation for Wet: 30/68-18 P2L

Use	Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	12,5 (+0,5/- 1,5) J 18
Minimum cold pressure	1.3 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure				
Camber	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar

-3.5 °	0	3	3	3	3
-3.0 °	0	3	3	3	3
From -2 to -2,5 °	0	3	3	3	3

Recommendation for Slick, WET Lamborghini Huracan LP 620-2 Super Trofeo: 30/68-18 S9M RFID / P2L

Use	Lamborghini Huracan Super Trofeo - Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	12.5 (+/- 0,5) J 18
Minimum cold pressure	1.3 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure			
Camber	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar
-3,5 °	0	0	0	0
-3,25 °	0	0	0	0
-3,0 °	0	1	1	1
From -2.0 to -2.75 °	0	1	1	1

31/66-13

Recommendation for Single-seater Sprint Wet: 31/66-13 P312

Use	Track without banking
Maximum load	650 DaN
Maximum speed	300 Km/h
Nominal rim	13.7 (+/- 0,5) J 13
Minimum cold pressure	1.1 Bar
Run distance	200 Km

Number of runs	Minimum hot pressure					
Camber	1.45 Bar	1.5 Bar	1.6 Bar	1.7 Bar	1.8 Bar	1.9 Bar
-3.0 °	0	1	1	1	1	1
-2.5 °	0	1	1	1	1	1
From -2.0 to -2.25 °	0	1	1	1	1	1

31/71-18

Recommendation for Slick: 31/71-18 S7H / S8H / S8G / S9H / S9LL

Use	Track without banking
Maximum load	600 DaN
Maximum speed	320 Km/h
Nominal rim	13 (+/- 0,5) J 18
Minimum cold pressure	1.4 Bar
Run distance	250 Km

Number of runs	Minimum hot pressure					
Camber	1.6 Bar	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar

From -2.0 to -2.75 °	0	1	2	2	2

Recommendation for Slick LMP3 - 24H Le Mans 2017: 31/71-18 S9M RFID / S9L

Use	Circuit 24H Le Mans 2017 - LMP3
Maximum load	620 DaN
Maximum speed	320 Km/h
Nominal rim	13 (+/- 0,5) J 18
Minimum cold pressure	1.3 Bar
Run distance	180 Km

Number of runs	Minimum hot pressure				
Camber	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar
-2.50 °	0	0	0	0	0
-2.25 °	0	2	2	2	2
-2.00 °	0	2	2	3	3
-1.75 °	0	2	2	3	3

31/71-19

Recommendation for Slick: 31/71-19 S8H / S9A

Use	Track without banking
Maximum load	590 DaN
Maximum speed	320 Km/h
Nominal rim	12,5 (+/- 0,5) J 19
Minimum cold pressure	1.3 Bar
Run distance	200 Km

Number of runs	Minimum hot pressure				
Camber	1.7 Bar	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar
-3.5 °	0	0	2	2	2
-3.25 °	0	1	2	2	2
-3 °	0	1	2	2	2
From -2 to -2.75 °	0	1	2	2	2

Recommendation for Slick: 31/71-19 S8L / S9L RFID / S7L / S9L

Use	Track without banking
Maximum load	630 DaN
Maximum speed	320 Km/h
Nominal rim	13 (+/- 0,5) J 19
Minimum cold pressure	1.2 Bar
Run distance	270 Km

Number of runs	Minimum hot pressure				
Camber	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar
-3.5 °	0	0	1	1	1
-3.25 °	0	0	1	1	1
-3 °	0	0	2	2	2
From -2 to -2.5 °	0	0	2	2	2

Recommendation for Wet: 31/71-19 P2L

Use	Track without banking
Maximum load	630 DaN
Maximum speed	320 Km/h
Nominal rim	13 (+/- 0,5) J 19
Minimum cold pressure	1.2 Bar
Run distance	270 Km

Number of runs	Minimum hot pressure				
Camber	1.8 Bar	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar
-3.5 °	0	0	1	1	1
-3.25 °	0	0	1	1	1
-3 °	0	0	2	2	2
From -2 to -2.5 °	0	0	2	2	2

Recommendation for Slick: 31/71-19 S8L / S9L RFID / S7L / S9L

Use	Track without banking
Maximum load	680 DaN
Maximum speed	320 Km/h
Nominal rim	13 (+/- 0,5) J 19
Minimum cold pressure	1.2 Bar
Run distance	270 Km

Number of runs	Minimum hot pressure				
Camber	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar
-3.5 °	0	0	0	1	1
-3.25 °	0	0	1	1	1
-3 °	0	0	1	2	2
From -2 to -2.5 °	0	0	1	2	2

Recommendation for Wet: 31/71-19 P2L

Use	Track without banking
Maximum load	680 DaN
Maximum speed	320 Km/h
Nominal rim	13 (+/- 0,5) J 19
Minimum cold pressure	1.2 Bar
Run distance	270 Km

Number of runs	Minimum hot pressure				
Camber	1.9 Bar	2.0 Bar	2.1 Bar	2.2 Bar	2.3 Bar
